

# among Turkish nursing students during the COVID-19 pandemic

## Abstract:

Thanks for the opportunity to review this interesting paper. The current study is on a topic of relevance and general interest to the readership of the journal. Generally, the study is well written and presents a clear presentation of the findings. I enjoyed the reading. The following comments were provided below, and might be helpful to improve your study:

## Abstract

- **Objectives.** The aim of this study was to evaluate the compliance with SPS among NSS during the COVID-19 pandemic.
- Kindly spell out the abbreviation used in the objectives, as any abbreviation should be written in full, then use the abbreviation
- Refers to the study's setting and sample type.
- Instead of conducted, use conducted among
- Result: use female/ male instead of women/ men
- You did not mention the result of the regression analysis used.
- Support your conclusion with some improvement strategies you recommend for future practice or research.

## Introduction:

- Mention the World Health Organization (WHO) completely for the first time.
- Update the old reference.
- We recommend you elaborate more on the dimension of compliance with standard precautions and add operational or conceptual definitions of the dimensions you measured in the CSPS.

## **Materials & Methods**

- Indicate the type of sample and sample determination criteria.
- It is better to divide the data collection section into instruments and data collection procedures.

- Explain how did you approach the students through their academic schedule?
- Did you use hand-delivered or electronic surveys?

### ***The CSPS***

- Indicates that the CSPS was developed by whom?
- The total scores range from 0 to 20, and a higher score indicates better compliance with SPs.
- Indicate the point or the score (cutt of point) on which you judged the score as better compliance with SPs.
- Explain the Turkish validity and reliability that was conducted by Samur, Intepeler, Lam (2020).
- Data analysis. Add the level of significance and indicate dependent and independent variables in your regression analysis.

### **Ethical considerations**

- Explain how do you protect the rights of venerable groups in your study ( students)

### **Results**

- Use female/ male instead of women/ men
- A multiple regression analysis
- According to table 3, kindly explain the effect of each variable on CSPS.

### **Discussion**

- It is preferable to support each finding with at least two studies or references.
- In the last paragraph, explain the justification and rationale of your findings and support them with your recommendation for further qualitative study.
- The implications of your study for practice ,education, and research.
- Add the limitations of your study.

Add the confidence interval and level of significance to table 3.

### **References**

Update older references prior to 2015.
