

**Title: Comprehensive identification and expression analysis of CAMTA gene family in *Phyllostachys edulis* under abiotic stress (#79685)**

**Comments:**

- 1. In the rebuttal letter, authors have mentioned about the modifications according to the reviewers' comments. I appreciate it but most of the lines mentioned in the rebuttal letter describe something else in the "revised version".**

Example: please check the rebuttal letter regarding the suggested sentences in the manuscript "c) The expression of Moso bamboo CAMTA was higher....., d) For example, PHCAMTA07 was highly expressed..... and g) "The PheE2F/DP promoter in response to drought.....".

- 2. Why different styles have been followed for different subheadings? Rectify it.**

Some headings are mentioned below for your reference

"Expression of *PeCAMTA* Genes in Responses to Cold, Drought and Heat Treatments"

"The role of *PeCAMTA* genes in different tissues and organs"

"Evolutionary Characterization of the *PeCAMTA* gene family"

In some sentence, each words are capitalized, somewhere the first word is capitalized while somewhere only two words are capitalized. Make it uniform.

- 3. Figure 8 and 9 are almost providing similar information. Is there any extra information available in figure 9? Hence I suggest that figure 9 can be included in supplementary file.**
