Kirsten Christoffersen
Academic Editor
PeerJ

Dear Dr. Christoffersen,

We completed our revision of the manuscript (#2022:09:77297:1:1:REVIEW - Land use scenarios, seasonality, and stream identity determine the water physicochemistry of tropical cloud forest streams). We appreciate your time and that of the reviewers in helping us improve this manuscript.

Addressing your comments:

“The first is that I agree with your decision not to include elevation in the PCA due to co-correlation.”

No action taken.

“The other thing is if you have decided to include the raw data or not. In you comment to Reviewer 2, who suggest to place the raw data in a repository, that these data can be obtained from the author, while you in your repoes to Reviewer 3 (R30) says: ‘The raw data is now deposited in Zenodo.org and accessible to readers’. Please verify that the latter has happened and provide a link in the manuscript to where the data can be found.”

We apologize for the mixed messages. The raw data is available in Zenodo, and the detailed information is under “Associated Data.” The text reads:

Data is available at Zenodo as: Ramírez, Alonso & Vázquez, Gabriela. (2022). Stream Physicochemistry, La Antigua Watershed [Data set]. Zenodo.
<https://doi.org/10.5281/zenodo.7083510>

I understand that this statement is automatically added to the publication, so I did not add this to the manuscript. If this is incorrect, I will be happy to add a statement in the methods.

We will be happy to provide further information if necessary.

Sincerely,

ALONSO RAMÍREZ
Professor
