1	**Abstract**		In **Background**, the authors wrote: This study aimed to evaluate the load capacity of maxillary central incisors…… In **Methods**: the authors only wrote about load capacity In **Results**: the authors only wrote about load capacity and mode of fracture *<u>Note:</u>* *There are actually 3 points in this research:* *1. the difference in load capacity with different FRC* *2. differences in the model of fracture* *3. the effect of different cement (self-adhesive or self-etch resin cement) used* In **conclusion**: the authors should should cover all the three points.
2	**Introduction**		The author states that there are 3 null hypotheses, but the author does not explain what the background/reason for the hypothesis is. The author should write it in the Introduction. The aim of the study should cover all the points in null hypotheses.

3	**Methods**		How to ensure that the composite cores have the same shape and size for all samples?
4	**Discussion**		The authors states that: …. the types of post which revealed a statistical difference between group 1 (522.9N) and group 3 (421.1N). In Discussion, the authors should discuss/analyze tthat statement.
5	**Conclusion**		Please state your conclusion clearly/briefly base on your data/findings. *Note:* *There are actually 3 points in this research:* *1. the difference in load capacity with different FRC* *2. differences in the model of fracture* *3. the effect of different cement (self-adhesive or self-etch resin cement) used*
