

Reviewing

Basic Reporting

It is thought that the quality of the study will increase by making the necessary corrections. It is clear that this study will contribute to the literature.

Abstract

Inline 28-29:

In this section, it can be more clearly stated in the sentence as a result of.. which species has cut flower potential and in what respect.

Introduction

In line 54-57:

Once the explanation of abbreviations is given in the text, there is no need to express them again, such as (SCF).

Inline 66:

Is the literature on these species sufficient, not only in Turkey but also worldwide? If it is not enough, its importance not only for Turkey but also for world literature should be emphasized. For example, has any study been done before to evaluate these species as SCF? If it has not been done, this indicates the richness that the study adds to the literature.

Results

Inline 96-98:

Are soil properties a finding? If it is a finding, it should be included in the method section; if not, it should be included in the material section.

In line 102-106:

Information regarding the examination of phenological findings should also be included in the summary section. These findings are important in studies that take into account the harvest times of the relevant species.

The Latin names of the species should be stated at the first stage when the species names are used.

Conclusion

In line 305:

In this section, its importance can be emphasized especially for geographies similar to Türkiye or Eskişehir ecology. Or the fact that these species (if any) are resistant to extreme conditions may be presented as an advantage.
