

Review report

Manuscript title:

Influence of different cutting time-points on the yield and forage quality of sweet sorghum and sorghum Sudangrass hybrid varieties

General comments to Authors:

This paper is considered to be a study investigating changes in productivity and feed value according to the cutting height of Sorghum. The title needs to be corrected. Also, when presenting the table, it is more desirable to present only the average data rather than indicating all two years. Please refer to other papers and modify the table.

Specific Comments for the authors:

1. The part you modified should be identified in a different color.
2. Line 19: (1) The research objective and title do not match. Please edit the title. (line 1).
(2) Carbon and Nitrogen.....→ carbon and nitrogen
3. Line 26-35: Please make some modifications to enhance the fluency and clarity of the sentences.
4. Line 42-50: Explain the relevance of lignin to the purpose of the study.
5. Line 477: (1) C-N should be written as a full name because the following write of them are all used by full name.
(2) Different harvest heights, time and...
(3) In the conclusion, the authors did not consider the harvest time as an effect factor. I suggest that the authors confirm the objective of this study and modify the title, introduction and conclusion.
