

Comments Peer J-94190R1

Most of my comments have been revised. However, there are still some issues to clarify. Just so you know, minor revision is necessary.

Results

1. Line 187 to 188. "The proportion of atrial fibrillation was higher in men than in women." It is wrong. 23.4% of men and 40.7% of women. Atrial fibrillation in women is higher than in men.
2. Table 4 and Table 5 show the data excluding patients who underwent endovascular thrombectomy and those who used statin before stroke. The patient number is the same as in Table 3. Table 3 includes data on patients who used statins before stroke and who received an endovascular thrombectomy.

Discussion

3. There are some mistakes between lines 286 and 289, please correct them.
