

**Reviewer's Comments on “*Oncogenic Notch signaling in multiple myeloma*” (#99137)**

The review article submitted by Roosma entitled, "Oncogenic Notch Signaling in Multiple Myeloma." provides a comprehensive overview of the role of Notch signaling in multiple myeloma and its implications for disease progression and therapeutic targeting. The topic is highly relevant and timely, given the ongoing search for effective treatments for this incurable disease.

**Recommendation:** This paper is publishable subject to minor revisions noted. Further review is not needed.

**Comments:** The manuscript by *Roosma* reports oncogenic signaling pathways in multiple myeloma and provides significant insights into this process. The review is detailed. Some minor points to be considered:

**1. Clarity and Conciseness:**

- The review can be made clearer by simplifying some of the complex sentences and ensuring a more straightforward flow of information. For instance, the first sentence of the abstract could be split into two for better readability.

**2. Terminology Consistency:**

- Ensure consistent use of terminology. For example, "multiple myeloma" and "plasma cell cancer" are used interchangeably. Choose one term and use it consistently throughout the text.

**3. Grammar and Punctuation:**

- There are minor grammatical and punctuation errors that need correction.

#### **4. Sentence Structure:**

- Consider breaking it into two sentences for better clarity.
- Proof-reading is needed for minor grammatical errors.

In conclusion, I recommend the acceptance of the manuscript for publication in its original form with the suggested minor corrections. I believe these revisions will enhance the overall quality and accessibility of the article for a broader readership. I trust that the editorial team will effectively handle these minor adjustments.

Thank you for considering my feedback, and I appreciate the opportunity to contribute to the review process.

Best regards,

Ashutosh Prince
