Abstract

No notes

Introduction

No notes

Materials and methods

Map would be helpful

Histo images need some attention. See below.

Stats seem appropriate

Results

Italicize p for p values

Connect parentheses: instead of XXX)(XX should be XXX; XX)

Sperm result not mentioned? Something as simple as “no spermatocysts seen” would suffice

Figures

Fig 1. Figures need to be white balanced, general structures should be noted in fig with arrows/boxes

Fig 2. Same comment as above. Also for A if blue tag is scale bar should be mentioned in caption

Histology images are also too low of magnification for identifiable structures/glue imperfections are causing visual issues. A 20X photo, while showing less overall tissue area, would be more meaningful
