

Dear authors,

Thank you for your response. I believe the revisions have been beneficial to the manuscript and most of the comments have been addressed satisfactorily, except the Introduction section is still too long, should be write more briefly:

1. In the Introduction, Paragraph 1-4 (line 52-86) that are talking about odontometry should be shortened to 2 paragraph.
2. In the Introduction, Paragraph 5-8 (line 87-124) that are talking about CBCT should also be shortened.
3. These sentences:

Among the various teeth, mandibular premolars, particularly the first and second, are of considerable clinical significance due to their roles in chewing, maintaining occlusal balance, and serving as anchorage in orthodontic procedures (Albuquerque, Kottoor & Hammo, 2014). The morphological variations of these teeth influence the design of dental restorations and the maintenance of occlusal harmony, thereby affecting overall dental functionality (Sierpinska et al., 2017).

should be combined with paragraph 9 (line 125-135).

4. In the Introduction, Paragraph 9-10 (line 136-153) should be shortened, just focus on what is the aim/purpose of the study.
