

- **Point 1:** Phosphorylation doesn't need "s". Please remove the s from the end of phosphorylation word throughout the paper. It is my mistake for using does instead of doesn't in my comments. Apology about the mistake.
- **Point 2 In some places you have double spaces between the words.** Please read the paper and remove the double space where appropriate.
- **Line 48 remove** "and underlying mechanisms". The sentence should read: we evaluated the effects of GDF11 on C17.2 neural stem cells.
- **Line 98** space between GDF11 and was
- **Line 152** You should remove the full stop at the end of the sentence and in that case change And to and (Line 153).
- Line 204 determine not determinate
- **Western Blot analysis and validation section:** Make sure there is a space between the antibodies and the brackets (dilution factor).
- Line 247 You should remove the full stop at the end of the sentence and in that case change And to and (line 248)
- Line 270 remove one of the supplement
- Line 281 You should remove the full stop after ($p < 0.05$) and in that case change And to and.
- Line 291 remove the full stop after doubling
- Line 295 remove "s" from increases
- Line 301 remove "the" before GDF11 treated cells
- Line 303 remove pronounced
- Line 316 rewrite the following sentence:

"As compared with 0h, wound area of 36h that was still uncovered by 317 migrating C17.2 cells significantly decreased,"

- Page 376 You should remove the full stop after proteins and in that case change And to and.
