

## Comments on Manuscript 38726v2

---

This revised version is a great improvement of the first version. The review is comprehensive and is useful for proper management of agricultural landscapes.

However, the following minor comments need to be addressed.

L121: ~~The~~ intention (i.e. I suggest the insertion of the word “The” before “intention”)

L165 – 182: The pieces of information on these lines starting from the sentence, “The animal groups studied include...” do not seem to fit the sectional heading. I suggest this information is moved to “**Results and Discussion**” immediately before **Section 3.1**.

L187: (€

L225: remove “;”

L232 – 252: These lines contain information that are unrelated to the “**arthropod natural enemies**” in the sectional heading. I suggest you revise the title to cover the diversity of information in the section.

L271: ~~flower-based~~ → flower-based

L316 – 318: This sentence, “Despite the fact that the level of benefits differ between different types of field margin with different management approaches, presence of a field margin does did significantly increase the *farmland biodiversity* in arable farms” does not seem to have any direct relationship with birds. Do you mean “*farm bird diversity*”?

L359: ~~from~~ → by

L361: ~~farmland~~ → farmlands

L374-375: The phrase “for the provision of” appears unnecessary. Please revise the sentence.

L380: Revise the phrase “making it being a”

L387: “...it happens from the cultivated areas...” → ...the source is a cultivated area...

L404: “~~the slope of the area~~” → slopes

L410: ~~to~~ → on

L423: “Consequently, crops affected by this” → Consequently, ~~concerning~~ crops affected by this

L443: ~~lead~~ → leads

L451: to have-→ ~~to have~~

L576-577: which literature reveals? Please cite.

L587: Be consistent with the use of microfauna or macro fauna throughout the document
