

López et al., The effect of landscape on functional connectivity and shell shape in the land snail *Humboldtiana durangoensis*

Line 55: For the abstract, say ‘Last Glacial Maximum (LGM)’ at first mention

Line 136: ‘are included’

Line 180: Quaternary should be capitalized

Line 194: double period

Line 253: double period

Line 257: extra space

Line 269–70: Should ‘sunder’ be in all caps or not? It’s both here.

Line 283: ‘were log10 transformed to’

Line 283: I’d be careful here. Log-transforming data won’t remove the allometric component of shape change. It will only serve to help normalize data that scales across multiple orders of magnitude. Please reword.

Line 299: Could you give a little more info here? What means were used? Were the centroids the centroids of the PCA from the traditional morphometric analyses or centroid size?

Line 444: Grammar issue. Perhaps, “Thus, whereas it has been..’

Line 456: accidental return?

Line 463: ‘shell attributes could reflect’

Line 465: ‘occurred’ spelling

Table 5: ‘are shown’ rather than ‘showed’

Figure 1 caption. For A, B, and C in the caption, there are some weird parenthesis things happening. Double check and correct.
