

According to the authors, the proposed steganography method in this work is secure and can hide large payloads.

1-However, when a new method is developed, its reliability and superiority/weakness over other methods must be strictly tested.

2-The authors said that they used the secret sharing method in steganography methods. However, the abstract not included this topic and was not adequately explained in the general flow of the article.

In order for this study to be published, it is obligatory to perform the above-mentioned examination, comparison, safety tests and additions.
