- Upon reviewing the paper, it is evident that the references majorly consist of older sources, with relatively limited inclusion of more recent literature in a systematic manner.
- Additionally, there is room for improvement in the clarity and thoroughness with which the method employed to achieve the reported accuracy rate is described.
- The evaluation methodology should be discussed intensely with a comparative analysis. The overall structure of the article can be improved and justified to enhance the clarity and precision of the content.
- These suggestions are intended to refine the paper's language and align it with grammatical conventions in the lines-110,114,123,134,153,160,172,175,214 so as to improve the overall readability of the paper.

- Line 153: Instead of "carry out the experiment," you can use "conduct the experiment."

- Line 160: Change "programmed" to "programs."

- Line 172: Replace "shows" with "shown."

- Line 175: Change "algorithms" to "algorithm's."

- Line 110: Change "is" to "are" to match subject-verb agreement.

- Line 114: Change "process" to "processes."

- Line 123: Add a hyphen to "machine-learning" to make it "machine-learning."

- Line 134: Change "in prior to" to "before" for better phrasing.

- Line 214: Change "contributes" to "contribute" for verb consistency.

- Alignment: Align the text of the paper to be justified for a more professional appearance.
